ω,
(LPAAT) isoenzyme. The nucleic acid may be used to create transgenic plants which encode LPAAT at higher or lower levels than normal or in cell types or developmental stages in which they are not normally found. This would have the effect of altering the level of specific triacylglycerols in those cells, for e.g. overexpression of an LPAAT similar to the maize LPAAT will result in higher oil content in the seed, stem and leaf. LPAAT chimeric genes may be used for co-suppression of genes encoding LPAAT. The polynucleotides may also be used as probes for genetically and physically mapping the genes that are a part of, and as markers for traits linked to those genes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     131

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence encodes a lysophosphatidic acid acetyltransferase (LPAAT) isoenzyme. The nucleic acid may be used to create transgenic plants which encode LPAAT at higher or lower levels than normal or in cell types or developmental stages in which they are not normally found.
                                                                                                                                                                                                                                                                                                                                                         1168 CACTTATGCAAATTCTGATTCAATTCTCAGAGTCAGAGGGTTCAAACCCGGCCAAG 1223

This would have the effect of altering the level of specific triacylglycerols in those cells, for e.g. overexpression of an LPAAT similar to the maize LPAAT will result in higher oil content in the seed, stem and leaf. LPAAT chimeric genes may be used for co-suppression of genes encoding LPAAT. The polynucleotides may also be used as probes for genetically and physically mapping the genes that are a part of, and as markers for traits linked to those genes	**************************************

Sequence 12, Application US/09215252

Patent No. 6300487.

GENERAL INFORMATION:

APPLICANT: ADOUREL, David W.

APPLICANT: HOLLENBACK, David

TITLE OF INVENTION: MAMMALIAN LYSOPHOSPHATIDIC ACID ACYLTRANSFERASE

FILE REFERENCE: 077319/0151

CURRENT APPLICATION NUMBER: US/09/215,252

CURRENT FILING DATE: 1996-12-18

PRIOR FILING DATE: 1996-12-18

PRIOR FILING DATE: 1996-03-19

NUMBER OF SEQ ID NOS: 42

SOFTWARE: Patentin Ver. 2.0

SEQ ID NO 12

LENGTH: 1660

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           g

i Sequence 14, Application US/09215252

i Sequence 14, Application US/09215252

i Patent No. 6300487

i GENERAL INFORMATION:

APPLICANT: LEUNG, David W.

APPLICANT: HOLLENBACK, Daniel

APPLICANT: HOLLENBACK, David

ITILE OF INVENTION: MAMMALIAN LYSOPHOSPHATIDIC ACID ACYLTRANSFERASE

ITILE OF INVENTION: MAMMALIAN LYSOPHOSPHATIDIC ACID ACYLTRANSFERASE

CURRENT APPLICATION NUMBER: US/09/215,252

CURRENT APPLICATION NUMBER: US 08/618,651

PRIOR PILING DATE: 1996-03-19

NUMBER OF SEQ ID NOS: 42

SOFTWARE: Patentin Ver. 2.0

SEQ ID NO 14

LENGTH: 1523

TYPE: DNA

ORGANISM: Homo sapiens

FRAUCT: (233)..(1174)

US-09-215-252-14

US-09-970-989A-16

Sequence 16, Application US/09970989A

Patent No. 6670143

GENERAL INFORMATION:

APPLICANT: LEUNG, DAVID W.

APPLICANT: ADOUREL, DAVIEL

APPLICANT: HOLLENBACK, DAVID

TITLE OF INVENTION: MAMMALIAN LYSOPHOSPHATIDIC ACID ACYLTRANSFERASE

FILE REFERENCE: 077319/0275

CURRENT FILING DATE: 2001-10-05

PRIOR APPLICATION NUMBER: 09/215,252

PRIOR PLLING DATE: 1998-12-18

PRIOR FILING DATE: 1996-03-19

NUMBER OF SEQ ID NOS: 45

SEQ ID NO 16

LENGTH: 1774

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
